Art Unit: 2863

DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the elastic member connecting the contact block and the lead pusher (claim 11) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 10/820,747

Art Unit: 2863

Claim Objections

Claims 11-13 are objected to because of the following informalities:

- claims 11-13, "the contact block" lacks antecedent basis.
- claim 12, "a second elastic member" lacks antecedent basis. Where is the first elastic member?

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 4, 10, 12, and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee et al. (2005/0012498).

Regarding claim 1, Lee et al. discloses an inspecting apparatus (Fig. 1) for a semiconductor device (paragraph 0024, line 2) comprising:

Art Unit: 2863

- a match plate (357);

- a contact module (355) combined with the match plate (paragraph 0076, lines

5-7), the contact module comprising:

- a radiator (403) to contact the semiconductor device (paragraph 0082, lines 4-

5), and a tester (comprises 300) to contact leads (361) of the semiconductor device

(paragraph 0070, lines 1-3), and a thermally conductive pad (conductor, paragraph

0018, line 13) installed on a contacting face of the radiator, to transfer heat from the

semiconductor device to the radiator (paragraph 0018, lines 12-19).

Regarding claim 3, Lee et al. discloses that the thermally conductive pad is compressible

(conductor is deemed to be compressible).

Regarding claim 4, Lee et al. discloses that the thermally conductive pad is compressible from

1-2 mm (if an adequate force is applied to the conductor).

Regarding claim 10, Lee et al. discloses that the radiator comprises:

- a heat sink (403);

- a contact pusher (350) to contact the semiconductor device having the thermally

conductive pad attached to a contacting face (paragraph 0076, lines 1-3);

- a heat flat pusher (351) combined with the contact pusher and the heat sink to transfer

heat from the semiconductor device to the heat sink via the contact pusher (Fig. 12).

Regarding claim 12, Lee et al. discloses a second elastic member (358) installed between the match plate and the contact block, to allow the contact block to move up and down elastically corresponding to ascent and descent of the match plate, thereby pressing the lead pusher against the leads of the semiconductor device (Fig. 13).

Regarding claim 15, Lee et al. discloses that the second elastic member is a spring (Fig. 13).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al. in view of Hirotsuru et al. (US 6,447,894).

Lee et al. discloses all the claimed limitations as discussed above except the thermally conductive pad comprises a ceramic-silicon composite.

Nevertheless, Hirotsuru et al. discloses that a ceramic-silicon composite (column 1, lines 1-2) for the purpose of having excellent thermal conductive characteristic and light weight (column 1, lines 2-4).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide Lee et al. with a ceramic-silicon composite as disclosed by Hirotsuru et al. for the purpose of having excellent thermal conductive characteristic and light weight.

Allowable Subject Matter

Claims 2, 6-9, 11, 13, 14, and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 17 and 18 are allowed.

Reasons For Allowance

The **combination** as claimed wherein the inspecting apparatus for the semiconductor device comprising a plurality of contact modules, wherein the match plate is formed with a plurality of combining holes combinable with the plurality of contact modules (claims 2, 18) or

the thermally conductive pad is installed on the radiator using a thermally conductive double-sided adhesive member (claims 6, 7) or a first elastic member installed on the circumference of the heat flat pusher to elastically connect the contact block and the lead pusher (claim 11) or the compressible thermally conductive pad conforms to irregularities of the semiconductor device, preventing air from being present between the thermally conductive pad and the semiconductor device when the thermally conductive pad and the semiconductor device are in contact (claim 17) is not disclosed, suggested, or made obvious by the prior art of record.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Nghiem whose telephone number is (571) 272-2277. The examiner can normally be reached on M-H.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571) 272-2269. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/820,747 Page 8
